

Free sample testing

Evaluate the benefit of TIDAS, without obligation. Labman provide a **free sample testing** service which allows you to see real results from your liquid samples, tested on TIDAS. Simply send us your samples, and we will send you a full report to demonstrate how TIDAS can optimise your workflow.

To assess the value of TIDAS, we simply need you to send us 50ml liquid samples of your products for testing. Send a minimum of 5 liquid samples (10 maximum). Include standard products and any that are problematic and/or difficult to rate by eye. The same sample at different stages of manufacture can be interesting.

Testing samples will confirm that TIDAS performs well across your product range. You will receive an illustrative report indicating the potential improvements compared to your current process and show possible savings.

Sample testing also allows us to customise the software to match your rating requirements.

How to send your samples

Please ship to the address below DDP (delivered duty paid), and include a customs invoice stating the contents are free samples with no commercial value. For hazardous samples please email copies of the Material Data Safety Sheets (MSDS), Dangerous Goods Notice (DGN) with a packing list and customs invoice to tidas@labman.co.uk.
